Stoichiometry is indeed a method where we can find the various amounts of ingredients in a chemical reaction, using the conservation of matter. Mathematical model is constructed on the basis of Buongiorno model and a thermal convective boundary condition is taken over to replace the conventional fixed surface temperature.

Given a dimensionful function on someone-dimensional dimensionful set one  
Reduced national meat consumption accompanied by a rise in fruit, grain, and vegetable consumption diminishes the acreage used for grazing and feed in favor of less land-extensive

crops. The decreasing population of sensitive lichens in specific regions around the world due to low air quality level has made lichens as a bio-indicator for air pollution.
